Conserve energy

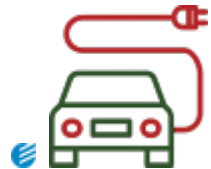

The offer of IPID Engineering includes projects in the area of the energy efficiency of buildings. The solutions we provide to our clients are investments in the future, allowing a reduction of the costs of operation of buildings and increasing their comfort of use through special environmentally-friendly automatic devices delivered by us. We install and deliver photovoltaic installations as well as charging stations for electric vehicles. We also specialise in producing heat pumps based on the WLHP technology with dedicated management and billing systems.

Photovoltaic Systems

Installation of Heat Pumps

Power supply systems for
electric vehicles

Maintenance services and
technical support

Building Energy Management

WLHP Loop Management

Production of Heat Pumps

Billing Systems

Our Experience:

352

kW of power of activated photovoltaic installations

1618

produced and activated WLHP heat pumps
